University of Ottawa

Department of Mathematics and Statistics

MAT 1302A: Mathematical Methods II

Professor: Hadi Salmasian

Second Midterm Test – White Version

March 6, 2015

Surname _____ First Name _____

Student # _____ DGD (1–4) _____

Instructions:

(a) You have 80 minutes to complete this exam.
(b) The number of points available for each question is indicated in square brackets.
(c) Unless otherwise indicated, you must justify your answers to receive full marks.
(d) All work to be considered for grading should be written in the space provided. The reverse side of pages is for scrap work. If you find that you need extra space in order to answer a particular question, you should continue on the reverse side of the page and indicate this *clearly*. Otherwise, the work written on the reverse side of pages will not be considered for marks.
(e) Write your student number at the top of each page in the space provided.
(f) No notes, books, scrap paper, calculators or other electronic devices are allowed.
(g) You should write in *pen*, not pencil.
(h) You may use the last page of the exam as scrap paper.

Good luck!

Please do not write in the table below.

Question	1	2	3	4	5	6	Total
Maximum	6	4	6	6	5	6	33
Grade							

QUESTION 1.

(a) **[2 points]** Let

$$A = \begin{bmatrix} 1 & 2 & 0 \\ 1 & -1 & 1 \\ 0 & 0 & 1 \end{bmatrix}.$$

Calculate A^2.

(b) **[4 points]** Let

$$A = \begin{bmatrix} 1 & 3 \\ 0 & -3 \end{bmatrix} \quad \text{and} \quad B = \begin{bmatrix} 1 & 1 \\ 0 & 1 \end{bmatrix}.$$

Find the matrix X satisfying the equation

$$(2X^T + A)B = I_2.$$

Here I_2 is the 2×2 identity matrix.

QUESTION 2. **[4 points]** For each statement below, indicate if it is true (T) or false (F). You will receive 0.5 points for each correct answer and lose 0.5 points for each incorrect answer, but you cannot receive a negative score on this question.

____ For all $n \times n$ matrices A and B, it is true that $(AB)^T = A^T B^T$.

____ For all $n \times n$ matrices A and B, it is true that $(A + B)^T = A^T + B^T$.

____ For all $n \times n$ matrices A and B, if A and B are invertible, then the product AB is invertible.

____ For all $n \times n$ matrices A and B, if A and B are invertible, then the sum $A + B$ is invertible.

____ The identity matrix I_7 is invertible.

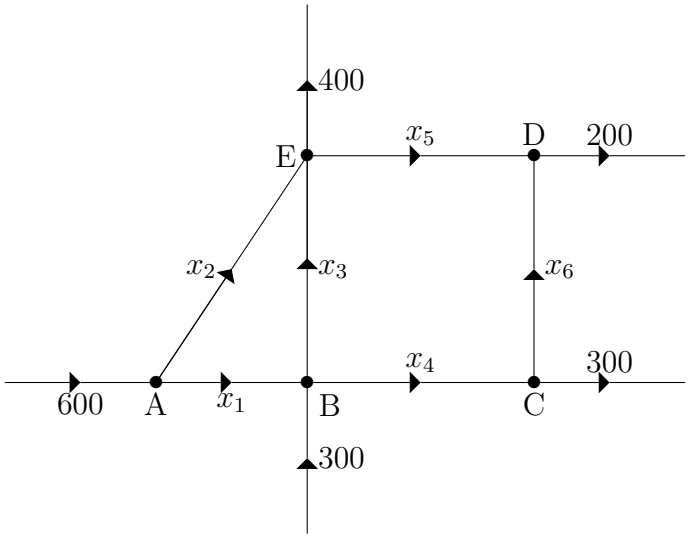

____ If A is an $n \times n$ invertible matrix, then there exists a vector $\vec{b} \in \mathbb{R}^n$ such that the system $A\vec{x} = \vec{b}$ is inconsistent.

____ The matrix $\begin{bmatrix} 3 & 2 \\ 2 & 3 \end{bmatrix}$ is not invertible.

____ If A is an $n \times n$ matrix such that the equation $A\vec{x} = \vec{0}$ has only the trivial solution, then A is invertible.

QUESTION 3.

(a) **[3 points]** Write a system of linear equations describing the flow in the following network. The letters A through E label nodes in the network and the arrows indicate the direction of flow. You do *not* need to solve the system.

(b) **[3 points]** The reduced echelon form of the augmented matrix associated to the linear system in part (a) is

$$\left[\begin{array}{cccccc|c} 1 & 0 & -1 & 0 & 0 & -1 & 0 \\ 0 & 1 & 1 & 0 & 0 & 1 & 600 \\ 0 & 0 & 0 & 1 & 0 & -1 & 300 \\ 0 & 0 & 0 & 0 & 1 & 1 & 200 \\ 0 & 0 & 0 & 0 & 0 & 0 & 0 \end{array}\right].$$

Find the general solution to this system. What are the minimum and maximum values for x_4 and x_6? (Use the fact that the flow along each edge in the network must be nonnegative.)

Question 4.

(a) **[4 points]** Is the matrix

$$A = \begin{bmatrix} 1 & 2 & 0 \\ 2 & 4 & 1 \\ 4 & 9 & 2 \end{bmatrix}$$

invertible? If so, find its inverse.

(b) **[2 points]** Let A be the matrix from part (a). Solve the equation $A\vec{x} = \vec{b}$, where $\vec{b}$ is the vector

$$\vec{b} = \begin{bmatrix} 1 \\ 1 \\ 0 \end{bmatrix}.$$

QUESTION 5. An economy consists of two sectors: industry and agriculture. In order to produce one unit, the industry sector consumes 0.4 units from industry and 0.8 units from agriculture. On the other hand, in order to produce one unit, the agriculture sector consumes 0.5 units from industry and 0.3 units from agriculture.

(a) **[1 point]** Write the consumption matrix C for this economy.

(b) **[1 point]** State the Leontief Input-Output Model production equation.

(c) **[3 points]** Determine the production levels necessary to satisfy a final demand of 10 units from industry and 10 units from agriculture.

QUESTION 6. **[6 points]** Are the following sets linearly independent? Justify your answers.

(a)

$$\left\{ \begin{bmatrix} 1 \\ -2 \end{bmatrix}, \begin{bmatrix} 0 \\ 2 \end{bmatrix}, \begin{bmatrix} 3 \\ 2 \end{bmatrix} \right\}$$

(b)

$$\left\{ \begin{bmatrix} 1 \\ 0 \\ 6 \\ 4 \\ 0 \end{bmatrix}, \begin{bmatrix} -1 \\ 3 \\ -1 \\ 1 \\ 1 \end{bmatrix} \right\}$$

(c)

$$\left\{ \begin{bmatrix} 3 \\ 0 \\ 0 \end{bmatrix}, \begin{bmatrix} 3 \\ 1 \\ 0 \end{bmatrix}, \begin{bmatrix} -1 \\ -1 \\ 2 \end{bmatrix} \right\}$$
